## Plantation operations

The Group recorded higher revenue and profit for the current quarter as compared to the corresponding period last year mainly due to a 42% higher FFB price, despite a 20% drop in the FFB production for the current quarter.

For the current year-to-date, the revenue and profit were 9% and 21% higher respectively as compared to the corresponding period last year mainly due to higher FFB selling price, despite a 6% drop in the FFB production.

The plantation operations did not face problem in selling its FFB production as most of the produce was supplied to mills within the Group.

## Palm oil milling operations

The higher revenue from the milling operations for the current quarter was mainly due to 33% higher average selling price despite a 10% drop in the quantity of CPO sold. As for the year-to-date, 10% higher revenue was mainly on account of a 12% increase in average CPO selling price.

The profit from the milling operations for the current quarter was 29% lower as compared to the corresponding period last year. The drop in the profit performance in the current quarter was mainly due to the lower processing throughput and oil extraction rate. However, the profit from the milling operations for the current financial year-to-date was 6% higher as compared to the preceding year mainly due to better margin as we managed to sell slightly above MPOB average price and high milling capacity utilization in the first three quarters of the year.

The market condition and demand for the Group's milling products has been good and stable for the current quarter and year-to-date.
